Backeye®360 – BN360-300 (SEL) (8488) Video Output Selection

Related Products - BN360-300 (SEL) (8488)

The updated BN360-300 (SEL) (8488) includes a DIP switch for selecting either AHD or CVBS video output. The installation and calibration process remains largely unchanged.

The AHD and CVBS video output on the ECU cannot output simultaneously. The correct video format setting must be selected via DIP switch 3 on the ECU. **The ECU must be powered off during DIP switch selection.** The change will be applied once the ECU is powered on.

Note: The default selection is AHD.

(Remove the DIP switch cover)

The two images on the right show each dip switch configuration to achieve an AHD or CVBS output.

AHD output

(DIP Switch 3 in OFF position)

CVBS output

(DIP Switch 3 in ON position)

NOTE: Do not touch dip switches 1 or 2 as they are factory use only.

More information about installing and configuring the BN6360-300 (8488) can be found in the [Installation and Calibration Guide](#).
