Backeye®360 – AHD Systems, USB Data Update

Related Products – Backeye®360 BN360-300 (5800) & BN360-300 (5800A) [Recordable]

Brigade currently have two versions of the Backeye®360 AHD systems. The non-recordable BN360-300 (5800) and the recordable BN360-300 (5800A). The latter allows the recording of the system images to a Mobile Digital Recorder (MDR), via a AC-H305 cable.

The firmware found in the USB data is version specific and cannot be interchanged. These are found in the **PRODUCT SUPPORT > Software** tab ([click here](#)), under **Select 360**, on the website. For the older 5800 version the USB data required is the 'BN360-300-USB (5805)' and for the current 5800A version it is the 'BN360-300-USB (5805A)'.

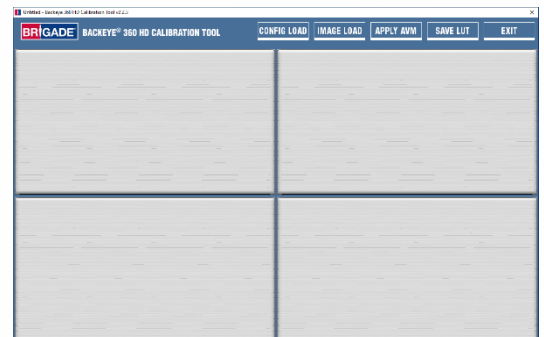

If the Backeye®360 system is loaded and calibrated with the incorrect USB firmware, the most common issue is a black and white image. If this happens the correct USB firmware will need to be downloaded and the system re-calibrated.

Note - The different USB firmwares do not affect the Calibration Tool or the Calibration Software.

Calibration Tool – BN360-CT-01

Calibration Software
